

OSSP (Operating Systems And Systems Programming) - 25CS2104E

1. Develop a C program that demonstrates how a Linux operating system executes a command entered by a user that 1. Accept a Linux command as input. 2. Create a child process using fork(). 3. Execute the command in the child process using an appropriate exec() system call. 4. Allow the parent process to wait for the child using wait (). 5. Display the Process ID (PID) of both parent and child processes.

Using Linux terminal commands (uname, lscpu, lsblk, ps, top), investigate the relationship between hardware resources and operating system services. Prepare a report explaining how the OS abstracts CPU, memory, storage, and I/O devices.

(uname):

```
abhinav@Abhinav :~$ nano childprocess.c
abhinav@Abhinav :~$ gcc childprocess.c -o program
abhinav@Abhinav :~$ ./program
Enter Linux command: uname
Parent PID : 1152
Child PID : 1153
Linux
Child process completed.
```

(lscpu):

```

Child process completed.
abhinav@Abhinav :~$ gcc childprocess.c -o program
abhinav@Abhinav :~$ ./program
Enter Linux command: lscpu
Parent PID : 1183
Child PID : 1184
Architecture:                x86_64
CPU op-mode(s):              32-bit, 64-bit
Address sizes:               39 bits physical, 48 bits virtual
